

Security System for highway's freeflow systems

Security system developed to cover the needs of the new remote toll paying systems that avoid users the need to stop their vehicle in order to pay for that service (free-flow systems).

The system Cryptopista is compliant with the European normative regarding the interoperability among the different payment actors involved (TAG's).

Characteristics:

- Secure key generation for the TAG devices (OBES).
- TAG's authentication control when running through the toll station.
- Digital signature of the captures made by the control stations.

The logo for realsec features the word "realsec" in a bold, green, sans-serif font, followed by a stylized green and yellow graphic of three overlapping rectangles.
