

# CryptosecOpenKey

Cryptosec OpenKey is the new high performance public key infrastructure developed by Realsec. With this product family Cryptosec OpenKey, any entity can create a public key infrastructure in a easy, fast and secure way. It can be done following any scheme that is presented and covering the life cycle of digital certificates, from generation to revocation, offering a full service to the end-use applications that use this technology: consulting the state of certificates and timestamp documents or transactions, such as electronic signatures.

Cryptosec OpenKey Suite consists of the following products:

- Cryptosec CA
- Cryptosec RA
- Cryptosec VA
- Cryptosec TSA

All these products are presented as an appliance, inside of which a HSM Cryptosec is installed, required as a cryptographic engine and keys secure storage. HSM has FIP 140-2 Level 3 certification, which makes the whole product acquire this certification. Administration of different products is Web interface with secure https requiring a recognized operator digital certificate.

Included in the product family, is Cryptosec OpenKey Connector, middleware component that enables the integration of different applications within the Suite.
