

## Electronic Signature Server

---

Cryptographic HSM Integrated Server designed for advanced digital signature of documents.

### Main Features:

- Highest performance in e-sign and verification processes.
- Multiple signature formats support: Adobe PDF, XAdES & PKCS#7.
- Via TCP/IP, the system is compatible with any operating system and programming language.
- Safe store and custody of Keys, protected by anti-intrusion mechanism (TAMPER RESPONSIVE) in HSM.
- Serial port communications for Keys import/export procedures.
- 1U Rackable system.
- FIPS 140-2 Level 3.1 Certified System.
- Graphical interface via web that permits to:
  - Generate certificates for strong authentication to the Service, by using SSL communications protocol.
  - Import Signature certificate in DER (protected) format.
  - Generate Keys and make requests to the certifier CA.
  - View auditing logs, errors and SSL events .
- Client application to be executed stand alone or to be integrated with Java or .Net applications.
